

# 95ATR

The 95ATR features a tournament butt stock with 7 ergonomically designed adjustment points for a personalized fit. The stock is available with either right hand "cast on" or left hand "cast off" configuration.

The adjustable comb system allows the shooter to adjust the comb height and offset position for proper eye alignment to the rib. The base plate is etched with 1/16" indicating line for precise left or right alignment of the comb. The height of the comb is adjusted by sliding washers over the selected support posts. Each shotgun includes two sets of support posts; standard and extended height.

The advanced butt plate system features 5 adjustment points that personalize the fit of the shotgun stock. The primary stock adjustment is the length of pull, which is measured from the trigger to the butt pad. A proper length allows the shooter to correctly mount the shotgun in the shoulder pocket. The length of pull is adjusted to fit the shooters height and muscular build. The LOP determines the location of the shooters cheek on the comb of the stock. The butt plate system has a 2 inch adjustment range, from a compressed 13 inch LOP to an extended 15 inch LOP.

The secondary adjustments are made to maximize the contact area of the butt pad face in the shoulder pocket of the shooter. These adjustments reduce the felt recoil of the shotgun. This butt plate system has four different adjustments that can improve the pad placement in the shoulder pocket. All of these adjustments are based upon the unique physique of the shooter.

## **95ATR TOURNAMENT STOCK Features 7 Ergonomical Adjustments Designed for Personalized Fit!**

First, the cast of the pad can be rotated from a vertical position, to reduce the canting effect of the barrels due to the stocks placement in the shooters shoulder pocket. This rotation moves the toe of the pad off of the top of the pectoral muscle reducing felt recoil and improving the consistency in the shotgun mount.

Secondly, the entire pad can be lowered to increase the drop dimension of the pad relative to the height of the comb. This adjustment takes into consideration of the physical dimensions of the shooter's neck length, cheek placement and their eye alignment to the rib.

Thirdly, the pad plate can be offset in either direction from the center line of the shotgun. This will allow the shooter to either push the centerline of the rib away from their face or to draw it closer to their face. This adjustment may be necessary, dependent upon the individual's facial dimensions.

The fourth adjustment is the pitch angle of the pad which helps reduce felt recoil due to muzzle jump. The pad plate has a factory setting of 4 degrees.

Not every shooter will require adjusting each facet of this butt plate system. However, the advanced ergonomic design of the 95ATR provides the shooter with the ability to adjust the shotgun to their unique physique.

# ADJUSTABLE RIB 50/50 to 90/10

The 95ATR unsingle barrel is fitted with a tapered adjustable rib that allows the shooter to change the point of impact without adjusting the stock. The rib is adjusted by loosening two set screws with a 3mm hex wrench. Then rotating the small knurled wheel in the muzzle support block to move the rib either up or down. From the factory, the unsingle barrel is set to shoot an approximate 60/40 pattern. The point of impact can be adjusted from 50/50 to 90/10 by simply changing the angle of the rib. The indicator lines etched onto the muzzle support block provide a guide when adjusting the rib. When the rib is located on the center indicator line, the point of impact will be approximately 60/40 pattern with the comb in the lowest position.

The 95ATR barrels are fitted with the Hi-Viz comp sight system. The sight is comprised of a base and a removable litepipe. The litepipe is an optical quality plastic, of precise dimensions and color. The shooter can select the diameter and color of the litepipe to meet the individual's preference and lighting conditions of the event.

## GUN CASE

The SKB 95ATR Trap Combo case is produced in Italy by Negrini. The patented double wall ABS technology is ultra-light, ultra-strong and airline approved. The case has three TSA approved recessed steel combination locks.

The case measures 37"(L) x 13"(W) x 4"(H) and weighs 10 lbs. The compact design includes two vertical barrel compartments, an oversized receiver compartment for the adjustable tournament stock, and separate compartments for the forend and accessories.
